

## PORCELAIN VENEERS

### Porcelain veneers can be a great aesthetic and restorative option **Are THEY the right choice for you?**

Not everyone needs veneers to achieve their smile goals, and not all veneers need to look Hollywood white and dazzling. But in many cases porcelain veneers are a fantastic solution to make subtle or drastic changes to the appearance of your teeth. And you can of course, have glowing white teeth if you wish. You are able to close gaps, improve colour and surface texture and change the shape of your teeth. They are customisable to your needs. What is essential to understand is that they are not indicated for everyone, and there are less invasive, less expensive options that need to be discussed with your dentist as part of any aesthetic consultation.

For example, it may be better to use simple tooth whitening to change the colour, or use aligners to close spaces. One of our team can advise you of all the advantages, limitations and ongoing maintenance

### WHAT IS A PORCELAIN VENEER?

Porcelain veneers are durable restorations made by a dental laboratory after a dentist has prepared or trimmed the tooth slightly. The amount of tooth removed to allow a veneer to fit is minimal, or in some cases none at all. Your dentist may make temporary veneers.
